Lookbook for Turtles

Did you know that leatherback sea turtles are the largest species of sea turtles in the world? There are only about thirty-five thousand nesting leatherback turtles compared to one hundred and fifteen million nesting Atlantic blue turtles. Their scientific name is Dermochelys Coriacea. Turtles are considered a type of reptile. It explains why a cold blooded animal with scales. The carapace can live on land and in water. There are eight habitats in the world a they live in.

This is the only sea turtle that does not have a shell and big scales. Although it does not have big scales and a shell, it does have a very big fin. These fins are like paddles to help them swim through the water. The back flippers are like a steering wheel. This sea turtle can live as long as seventy-five. They can weigh up to over three and a half tons.

They eat a lot of jellyfish and sea squirts. The sea turtles go to the depths of the ocean to eat their food. When there is no food they stay in one of the three or more hundred and three
