THE REEF TRIGGERFISH

Miles Glienke

Introduction

Aloha my friends, Today we will learn about the reef triggerfish, hawaii's state and reef fish and as the name suggests, you can find it in coral reefs.

Diet and predators

A humuhumu's diet involves algae and small coral reef inhabitants.

It's predators tend to be larger reef animals like sharks and tuna.

Interesting facts.

- There are around 40 types of triggerfish
- It is called a triggerfish because it's dorsal fins act like triggers
- It has teeth strong enough to break coral
- It is called the reef fish for all of it's vibrant colors
- They make a grunting sound to warn fish of enemies

Leebdock by Table

Dot you have that is the boots is to the same soly show that you be a factorial species of same tables in the work? There are only show there for a factorial arrang flowles, left to day compared to one bundwel and filters parsing fination in 1980. They account is interested by Converse Factorian are considered a type of raphic. Arraying it is a relative to the shift a simult with solars. This means is one for on land and as more: These are may hiring as in der with a first dort years.

This is the only one water that they can be et al. and buy souths: Adding the advectory for a big station and a dard, it does have very buy film. Then they are large publics to help them or an through the same. The back degrees are later sourceasy where I. They are under an low at long as serves him. They can are giving our row there and granula.

They set a list of polylich and on opints. The set further price the deptice of the secons to not these lists. Such as more than on mail the time they is not of a down as marked and down.
